

Update 10.04.2020 - Keeping key workers and the NHS on the road

Mobile ADAS (Advanced Driver Assist Systems) Calibration and Resets

Cars are constantly evolving, and more and more safety features are now being integrated within them. Advanced Driver Assistance Systems, or ADAS, collectively describe the advanced features now incorporated into many modern vehicles, for example adaptive cruise control, active brake assist and lane departure warnings. These systems are controlled by cameras, sensors and radar and correct calibration is vital for the systems to function correctly, especially following an accident where body repair work has been necessary

Fleetline uniquely have a **truly mobile fully self-contained** capability. We can come to you and do resets on 95% of all modern cars. With most main dealers now closed we're trying our best to keep key worker and NHS vehicles moving and, on the road, backed up with our full compliance to social distancing whilst we are onsite

Simply call us on 020 8668 8888 to make a booking or for more information

This is a difficult time for everybody, and as we're open supporting critical services to stay on the road. We are here for everyone, Stay Safe

The Fleetline Team
