

Update 28.04.2020 – Fleetline Staff are trained on Electric and Hybrid cars

With electric vehicle sales predicted to reach 45 billion worldwide by 2040, the next twenty years are set to dramatically change the automotive market.

A recent report commissioned by the Institute of the Motor Industry (IMI), indicates that the social benefit of EVs, connected and autonomous vehicles are likely to bring about 320,000 newly-created industry jobs, and of course, these jobs will require an expanded skill set from existing automotive engineers, customer facing staff and estimators alike...

Our staff at Fleetline have all attended a course aimed at awareness around Electric and Hybrid cars and are accredited for the following:

- Functionality and safety issues around the main components used on the HV electric system (battery, inverter, motor/generator)
- The dangers of electricity and associated hazards
- First Aid procedure in the event of an electrical accident
- Basic electrical theory to support the above
- Current legislation with respect to working on electrical systems
- Safe working practices covering PPE requirements and industry best practice

This is especially relevant at Fleetline as we are one of the only Multi Manufacturer Approved Body Shop's around to offer an 'All Electric Courtesy Car' to our customers, the fabulous Audi e-tron. We invest in our staff, we invest in our customers and we invest in our technology...

This is a difficult time for everybody, and as we are open supporting critical services to stay on the road. We are here for everyone – Stay Safe.

The Fleetline Team
